2	UCBOE0622	Intellectual Property and Entrepreneurship

Title of the Course: Design and Analysis of Algorithms		L	T	P	Credit								
Course Code: UCBPC0501		3	0	0	3								
Course Pre-Requisite: Basic knowledge of Data Structures and Algorithms.													
Course Description: This course introduces the concept of algorithm as a precise mathematical concept, and studies how to design algorithms, establish their correctness, and study their efficiency and memory needs.													
Course Learning Objectives:													
1. To demonstrate the performance of algorithms for time and space complexity.													
2. To explain graph and tree traversals.													
3. To use and apply standard algorithm design techniques.													
4. To familiarize oneself with the concepts of deterministic and non-deterministic algorithms.													
Course Outcomes:													
CO	After the completion of the course, the student should be able to	Bloom's Cognitive											
		Level	Descriptor										
CO1	Understand basic concepts of algorithms and measure the efficiency of any algorithm.	2	Understand										
CO2	Make use of standard design techniques such as divide and conquer, greedy algorithms, dynamic programming, backtracking to solve real life problems.	3	Apply										
CO3	Compare the analysis of the performance of various algorithms.	4	Analyze										
CO4	Analyze the polynomial and nonpolynomial Algorithms.	4	Analyze										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	2	3	3									2	2
CO2	2	2			2							2	2
CO3	2	3	3		2							2	2
CO4	2	2	3		3							2	2

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction****CO1****8 Hours**

What is an Algorithm? Algorithm Specification: Pseudocode Conventions, Recursive Algorithm Performance Analysis: Space complexity, Time complexity. Asymptotic Notations: Big-Oh notation (O), Omega notation (Ω), Theta notation (Θ), and Little-Oh notation (o). Performance Measurement Recurrences: The substitution method, recursion tree method, Important Problem Types: Sorting, Searching, String processing, Graph Problems.

Unit 2: Algorithm Design and Analysis Techniques – I:**CO2, CO3****8 Hours**

Divide and conquer General method, Binary search, Recurrence equation for divide and conquer, Finding the maximum and minimum, Merge sort analysis of these algorithms. Decrease and Conquer Approach: Topological Sort. Transform and Conquer Approach: Heaps and Heap Sort.

Unit 3: Greedy Method**CO2, CO3****7 Hours**

General method, Coin Change Problem, Knapsack Problem, Job sequencing with deadlines. Optimal storage on tapes, Optimal merge patterns, Huffman codes.

Unit 4 : Algorithm Design and Analysis Techniques – II:**CO2, CO3****8 Hours****Dynamic Programming**

The general method, Multistage graphs, Optimal binary search trees, 0/1 knapsack, Reliability design, Traveling Salesperson problem. Backtracking: The general method, 8-queen problem, Sum of subsets, Graph Coloring, Knapsack Problem, Branch & Bound Algorithms.		
Unit 5: Graph Algorithms: Elementary Graph Algorithms	CO2, CO3	8 Hours
Representations of graphs, Breadth-first search, Depth first search Minimum Spanning Trees: minimum spanning tree, The algorithms of Kruskal and Prim Single-Source Shortest Paths: The Bellman-Ford algorithm, Single-source shortest paths in directed acyclic graphs, Dijkstra's algorithm, The Floyd-Warshall algorithm		
Unit 6: Complexity classes :P & NP-Complete:	CO4	6 Hours
Basic concepts, non-deterministic algorithms, Polynomial time, and polynomial time verification, NP completeness and reducibility, NP-complete problems, Importance of NP-completeness, P, NP, NP Complete and NP hard problems. case studies		
Textbooks:		
1. Thomas Cormen, Charles Leiserson, Ronald Rivest and Clifford Stein, "Introduction to Algorithms", PHI 2. Fundamentals of Computer Algorithms - Ellis Horowitz, Satraj Sahani, Saguthevar Rajasejaram, Universities Press, Second Edition.		
References:		
1. Fundamentals of Algorithmics – Gilles Brassard, Paul Bratley (Pearson Education). 2. Mastering Algorithms with C – Kyle Loudon (SPD O'Reilly). 3. Computer Algorithms- Introduction to Design and Analysis – Sara Baase, Allen Van Gelder (Pearson Education).		

Title of the Course: Compiler Design (LEX and YACC)		L	T	P	Credit								
Course Code: UCBPC0502		3	0	0	3								
Course Prerequisite: System Programming and Finite automata & Formal Languages													
Course Description: This course is designed to understand the various system software and also study in detail about design of compiler.													
Course Learning Objectives:													
1: Students will be able to understand fundamentals of system software and compilation steps													
2: Students will be able to understand lexical and parsing techniques of the compiler.													
3: Students will be able to understand code generation and optimization in compilation process													
4: Students will be able analyze parsing algorithms using program applications													
Course Outcomes:													
CO	After the completion of the course the student should be able to	Bloom's Cognitive											
		Level	Descriptor										
CO-1	To understand the concept of symbol table and to use various code optimization techniques	2	Understand										
CO-2	Able to apply the knowledge of LEX tool and YACC tool to develop a scanner and Parser.	3	Apply										
CO-3	Able to design syntax tree and intermediate code generator	3	Apply										
CO-4	Analyze and implement code optimization and code generation techniques to create target code	4	Analyze										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	3	2	-	-	2	-	-	-	-	-	-	1	
CO2	3	2	-	1	2	-	-	-	-	-	-		
CO3	3	2	1	1	2	-	-	-	-	-	-	1	
CO4	3	2	1	1	2	-	-	-	-	-	-	1	

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction****CO-1****7-Hours**

Introduction, Language processing system, Language processor, Structure of compiler, Cousins of Compiler.

Unit 2: Lexical Analysis**CO-2****8-Hours**

Lexical Analysis: Role of Lexical Analyzer, Lexical Errors, Lexeme, Tokens and Patterns, Input Buffering, Specification and Recognition of Tokens, Transition Diagram, Finite Automata, Lexical Analyzer Generator: LEX

Unit 3: Syntax Analysis**CO-2****8-Hours**

Introduction, Context Free Grammar (CFG), Top-Down Parsing: Recursive Descent Parsing Technique and Predictive Parsing Technique: First set and Follow set, LL (1), Bottom-up Parsing: SR-Parsing Technique, LR (0), SLR (1), CLR (1), LALR (1), Yacc.

Unit 4: Syntax Directed Translation**CO-3****8-Hours**

Syntax directed translation: Introduction, SDD, SDT, Synthesized attributes, Inherited attributes, S-Attributed definition, L-Attributed definition, Annotated Parse Tree.

Unit 5: Intermediate code generation	CO-3	8-Hours
Introduction, Postfix notation, Triple and Quadruples, Three Address Instructions, Three Address Code for Boolean expression, and Assignment Statements		
Unit 6: Code Optimization and Code Generation	CO-4	6-Hours
Introduction to Code Optimization, Principle Sources of Optimization, Peephole Optimization, Introduction to code generation, Issues in code generation		
Textbooks:		
1. Compilers: Principles, Techniques and Tools, Jeffery D. Ullman, Alfred V Aho, Ravi Sethi Pearson Education India. 2. System Programming and Operating System, D. M. Dhamadhere, 2nd Edition-McGraw Hill Education India.		
References:		
1. Compiler Construction, D.M. Dhamdare, Mc-Millan. 2. A Guide to Design and Analysis of Algorithms - Soubhik Chakraborty / prashant pranav / khatton / Dutta.		

Title of the Course: Cloud, Microservices & Application		L	T	P	Credit								
Course Code: UCBPE0511		3	0	0	3								
Course Pre-Requisite: Basic Computer Science concepts like networking, database, OS etc.													
Course Description: This course intends to introduce students to the fundamentals of Cloud, Microservices and its applications in public clouds such as AWS, AZURE and GOOGLE (GCP).													
Course Learning Objectives:													
1. To Understand the fundamentals of Cloud concepts such as Cloud services, Applications and Public Cloud Platform. 2. To Illustrate the fundamentals of microservices and API to solve a problem in Cloud. 3. To Interpret the DevOps fundamentals and Containerization process and application. 4. To Apply the Cloud services to design and develop the solution by using Kubernetes, Cloud security and monitoring tools.													
Course Outcomes:													
CO	After the completion of the course the student should be able to	Bloom's Cognitive											
		Level	Descriptor										
CO1	Understand the fundamentals of Cloud concepts such as Cloud services, Applications and Public Cloud Platform.	2	Understand										
CO2	Illustrate the fundamentals of microservices and API to solve a problem in Cloud.	2	Understand										
CO3	Interpret the DevOps fundamentals and Containerization process and application.	2	Understand										
CO4	Apply the Cloud services to design and develop the solution by using Kubernetes, Cloud security and monitoring tools.	3	Apply										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	2	2	1								2	2	1
CO2	2	2	2	2	1						2	2	2
CO3	2	3	2	2	1						2	2	2
CO4	2	3	3	2	3							2	3

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Cloud Fundamentals****CO1****08 Hrs.**

Cloud Service Components, Cloud Service/Deployment models, Cloud Components Guiding Principles with respect to Utilization/Security/Pricing, Applications of Cloud, Public Cloud Platforms overview and their usages.

Unit 2: Microservices and API Fundamentals**CO1,CO2****08 Hrs.**

Application Architectures : Monolithic & Distributed Architecture, Microservice fundamental and design approach, Spring Boot fundamentals and Design of Microservices, Cloud Native applications-12 Factors App. Application integration process/Apification Process, API Fundamental, API management, API tools. Developer Portal. Applications of APIFICATION.

Unit 3: DevOps Fundamentals and Containerization:**CO3****07 Hrs.**

Tools and Applications, Containerization Process and application.

Unit 4: Design and Developing Solutions:**CO3****08 Hrs.**

Instructions briefing for steps involved in Cloud Application Development/Deployment/Execution. Using containers, containerization of application and deployment using Kubernetes.

Unit 5: Cloud Security and Monitoring:	CO3	08 Hrs.
Cloud Security and Monitoring Tools.		
Unit 6: Use Cases:	CO4	06 Hrs.
Project use cases for different Cloud Services. AWS : features use cases -ex, Lambda Functions. Azure features use cases. GCP features use cases.		
Textbooks:		
1. A First Course on Cloud-Based Microservices: A Competency by Arshdeep Bahga, Vijay Madisetti 2. Cloud Computing: A Hands-On Approach.		
References:		
1. Cloud native microservices with spring and kubernetes : Design and build modern cloud native applications using spring and kubernetes, Srivastava, Rajiv, Bpb publication 2021 2. Building Microservices 2nd Edition by Sam Newman O'Reilly.		

Title of the Course: Artificial Intelligence											L	T	P	Credit
Course Code: UCBPE0512											3	0	0	3
Course Pre-Requisite: Basic Computer Science concepts														
Course Description: This course is about to understand the basic Principles of Artificial Intelligence														
Course Learning Objectives:														
1. To Understand the fundamentals of AI concepts such as searching based analysis.														
2. To Illustrate the constraint and knowledge reasoning based approach to solve a problem in AI.														
3. To Interpret the probabilistic reasoning based solution in AI and understand the expert system, also apply the knowledge of AI techniques to solve a problem.														
4. To apply the AI techniques to the real world problems														
Course Outcomes:														
CO	After the completion of the course the student should be able to										Bloom's Cognitive			
											Level	Descriptor		
CO1	Understand the fundamentals of AI concepts such as searching based analysis.										2	Understand		
CO2	Illustrate the constraint and knowledge reasoning based approach to solve a problem in AI.										2	Understand		
CO3	Interpret the probabilistic reasoning based solution in AI and understand the expert system.										2	Understand		
CO4	Apply the AI techniques to solve problems										3	Apply		
CO-PO Mapping:														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	
CO1	2	2	1								2	2	1	
CO2	2	2	2	2	1						2	2	2	
CO3	2	3	2	2	1						2	2	2	
CO4	2	3	3	2	3							2	3	

Assessments:												
Teacher Assessment:												
Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.												
<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ISE-1</td><td>10</td></tr><tr><td>MSE</td><td>30</td></tr><tr><td>ISE-2</td><td>10</td></tr><tr><td>ESE</td><td>50</td></tr></table>			Assessment	Marks	ISE-1	10	MSE	30	ISE-2	10	ESE	50
Assessment	Marks											
ISE-1	10											
MSE	30											
ISE-2	10											
ESE	50											
ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.												
MSE: Assessment is based on 50% of course content (Normally first three modules)												
ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.												
Course Contents:												
Unit 1: Introduction and Overview of Artificial intelligence:	CO1	08 Hrs.										
Problems of AI, AI technique, Tic - Tac - Toe problem. Intelligent Agents, Agents & environment, nature of environment, structure of agents, goal-based agents, utility-based agents, learning agents												
Unit 2: Problem Solving & Search Technique:	CO2	08 Hrs.										
Defining the problem as state space search, production system, problem characteristics, issues in the design of search programs. Search Technique: Problem solving agents, searching for solutions; uniform search strategies: breadth first search, depth first search, depth limited search, Heuristic search strategies Greedy best-first search, A* search, AO* search, Hill climbing search.												
Unit 3: Constraint satisfaction problems:	CO2	07 Hrs.										
Local search for constraint satisfaction problems. Adversarial search, Games, optimal decisions & strategies in games, the minimax search procedure, alpha-beta pruning, additional refinements, iterative deepening.												
Unit 4: Knowledge & reasoning:	CO3	08 Hrs.										
Knowledge representation issues, representation & mapping, approaches to knowledge representation. Using predicate logic, representing simple fact in logic, representing instant & ISA relationship, computable functions & predicates, resolution, natural deduction. Representing												

knowledge using rules, Procedural versus declarative knowledge, logic programming, forward versus backward reasoning, matching, control knowledge.		
Unit 5: Probabilistic reasoning:	CO3	08 Hrs.
Representing knowledge in an uncertain domain, the semantics of Bayesian networks, Dempster-Shafer theory, Planning Overview, components of a planning system, Goal stack planning, Hierarchical planning, other planning techniques.		
Unit 6: Expert Systems	CO4	06 Hrs.
Representing and using domain knowledge, expert system shells, and knowledge acquisition.		
Textbooks:		
1. Artificial Intelligence: A Modern Approach by Stuart Russell and Peter Norvig. 2. Artificial Intelligence by Russel. Pearson.

Title of the Course: IT Project Management		L	T	P	Credit								
Course Code: UCBPE0513		2	-	-	2								
Course Prerequisite: A basic understanding of computer science concepts, project management principles, and information systems, or business administration.													
Course Description: The IT Project Management course provides students with the knowledge and skills to plan, execute, and manage IT projects effectively. It covers key concepts such as project life cycle, risk management, scheduling, budgeting, and team coordination. The course also emphasizes communication, quality management, and handling organizational change to ensure successful project outcomes.													
Course Learning Objectives:													
1. Students will be able to understand basic project management principles, including project planning, risk management, and team collaboration.													
2. Students will be able to apply comprehensive project plans, incorporating project scheduling, and resource allocation.													
3. Students will be able to analyze security risk assessments and propose mitigation strategies based on security engineering principles.													
4. Students will be able to manage teams and communication, quality, and organizational change.													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom's Cognitive										
			Level	Descriptor									
CO1	Understand the fundamental concepts of IT project management & project planning		2	Understand									
CO2	Implement effective risk, quality, and change management strategies		3	Apply									
CO3	Manage teams and communication, quality, and organizational change.		4	Analyze									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	2	2								3

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.												
MSE: Assessment is based on 50% of course content (Normally first three modules)												
ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.												
Course Contents:												
Unit 1: The Nature of Information Technology Projects	CO1	6 Hours										
Introduction, The Software Crisis, The Context of Project Management, The Project Life Cycle and IT Development, The Project Management Body of Knowledge.												
Conceptualizing and Initializing the IT Project: An Information Technology Project Methodology (ITPM), The Business Case, Project Selection and Approval												
Unit 2: Developing the Project Charter and Baseline Project Plan	CO1	5 Hours										
Project Management Processes, Project Integration Management, The Project Charter, Project Planning Framework. The Human Side of Project Management: Organization and Project Planning, The Project Team.												
Unit 3: Defining and Managing Project Scope	CO2	6 Hours										
Project Scope Management Processes, Project Scope Initiation, Project Scope Definition, Project Scope Verification, The Work Breakdown Structure and Project Estimation: The Work Breakdown Structure (WBS), Project Estimation.												

Unit 4: The Project Schedule and Budget	CO2	5 Hours
Developing the Project Schedule, Project Management Software Tools, Developing the Project Budget, Finalizing the Project Schedule and Budget Managing Project Risk: IT Project Risk Management Planning Process, Identifying IT Project Risks, Risk Analysis and Assessment.		
Unit 5: Project Communication, Tracking, and Reporting	CO3	4 Hours
Introduction, Monitoring and Controlling the Project, The Project Communications Plan, Project Metrics IT Project Quality Management: Quality Systems, The IT Project Quality Plan.		
Unit 6: Managing Organizational Change, Resistance, and Conflict	CO3	4 Hours
The Nature of Change, The Change Management Plan, Develop or Adopt a Strategy for Change Project Implementation, Closure, and Evaluation: Project Implementation, Administrative Closure, Project Evaluation IT Project Case Studies- Banking project, ERP management system

Title of the Course: Introduction to Data Analytics							L	T	P	Credit			
Course Code: UCBOE0521							3	0	0	3			
Course Prerequisite: Basic mathematics, statistics, programming, critical thinking, basic machine learning													
Course Description: This course provides an opportunity to discover the power of data analytics and learn how to extract meaningful insights from raw data. Gain hands-on experience in data collection, preprocessing, statistical analysis, and visualization using industry-standard tools and techniques.													
Course Learning Objectives:													
1: Students will be able to understand fundamentals of system software and compilation steps													
2: Students will be able to understand lexical and parsing techniques of the compiler.													
3: Students will be able to understand code generation and optimization in compilation process													
4: Students will be able analyze parsing algorithms using program applications													
Course Outcomes:													
CO		After the completion of the course the student should be able to						Bloom's Cognitive					
								Level	Descriptor				
CO1		Explain various concepts and terminology used in data analytics.						2	Understand				
CO2		Analyze statistical data analysis techniques for data preparation and exploration.						2	Understand				
CO3		Apply appropriate tools for data acquisition, preprocessing, analysis, and visualization.						3	Apply				
CO4		Identify the appropriate methods and tools to solve business problems using data analytics.						4	Analyze				
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO	2	1											1
CO2	2	2		2	3							3	1
CO3	2	2		2	3							3	1
CO4	2	2		1	3							3	1

Assessments:

Teacher Assessment:

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:

Unit 1: Introduction	CO1, CO3	07 Hrs
Overview of data analytics, Applications, Data analytics process, Types of data analytics, Business intelligence, Decision support system, Data mining.		
Unit 2: Data Collection and Preprocessing	CO3	08 Hrs.
Data acquisition methods and sources, Exploratory data analysis (EDA) techniques, Data cleaning techniques: handling missing values, outliers, and noise, Data validation, Data transformation, Data reduction, Normalization Techniques.		

Unit 3: Statistical Analysis: Descriptive statistics	CO2	08 Hrs.
Descriptive statistics: measures of central tendency, variability, and correlation, Measures of central tendency – mean, median and mode, Measures of dispersion – standard deviation, variance, range, IQR (interquartile range), Measure of symmetry/ shape – skewness and kurtosis, Data visualization principles and techniques.		
Unit 4: Statistical Analysis: Inferential Statistics	CO2	08 Hrs.
Hypothesis testing, parametric and nonparametric, Parametric tests: t-test, z-test, f-test, ANOVA, regression, non-parametric tests: Chi-square test.		
Unit 5: Data Analytics Tools	CO4	08 Hrs.
Understanding application scenarios and visualization with DA tools – Microsoft Excel, Python, R, SQL, Microsoft Power BI, Tableau.		
Unit 6: Case Studies	CO4	06 Hrs.
Five to ten case studies to be discussed. Sample case studies areas – retail, entertainment industry, travel industry, social media, healthcare, etc. Ethics in data analytics.

Title of the Course: Behavioral Economics Course Code: UCBOE0522		L	T	P	Credit								
		3	-	-	3								
Course Pre-Requisite: Basic knowledge of Economics.													
To impart knowledge on current ideas and concepts regarding decision making in Economics, particularly from a behavioral science perspective, which can affect choices and behavior of firms, households and other economics entities.													
Course Learning Objectives:													
1. To understand the concept and theory of economics. 2. To acquire knowledge on the choices and behavior of firms, households and other economics entities. 3. To learn the behavioral science perspective in economics. 4. To know the current ideas and concepts regarding decision making in economics. 5. To study the intertemporal choice in economics.													
Course Outcomes:													
CO	After the completion of the course the student should be able to				Bloom's Cognitive								
					Level	Descriptor							
CO1	Explore the knowledge on behavioral science perspective in Economics.				1	Remember							
CO2	Explain and apply various concepts in traditional and modern Microeconomics.				2	Understanding							
CO3	Understand current ideas and concepts regarding decision making in Economics and intertemporal choice in Economics				2	Understanding							
CO4	Focus on decision making, and develop a holistic understanding of these concepts and their interconnections.				3	Applying							
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1		2		2									2
CO2			2		2								2
CO3			2							2			2
CO4		2		2									2

Assessments:												
Teacher Assessment:												
Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.												
<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ISE-1</td><td>10</td></tr><tr><td>MSE</td><td>30</td></tr><tr><td>ISE-2</td><td>10</td></tr><tr><td>ESE</td><td>50</td></tr></table>			Assessment	Marks	ISE-1	10	MSE	30	ISE-2	10	ESE	50
Assessment	Marks											
ISE-1	10											
MSE	30											
ISE-2	10											
ESE	50											
ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.												
MSE: Assessment is based on 50% of course content (Normally first three modules)												
ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.												
Course Contents:												
UNIT 1: Introduction	CO1	08 Hours										
The neoclassical/standard model and behavioral economics in contrast; historical background; behavioral economics and other social sciences; theory and evidence in the social sciences and in behavioral economics; applications – gains and losses, money illusion, charitable donation.												
UNIT 2: Basics of choice theory	CO2	08 Hours										
Revisiting the neoclassical model; utility in economics and psychology; models of rationality; connections with evolutionary biology and cognitive neuroscience; policy analysis – consumption and addiction, environmental protection, retail therapy; applications – pricing, valuation, public goods, choice anomalies, Revisiting rationality; causal aspects of irrationality; different kinds of biases and beliefs; self-evaluation and self-projection; inconsistent and biased beliefs; probability estimation; trading applications – trade in counterfeit goods, financial trading behavior, trade in memorabilia												
UNIT 3: Micro Environment and Macro Environment	CO1	07 Hours										
Micro Environment Factors-customer, supplier, reseller,competitors, general public, Macro Environment factors-economic factors, demographic factors, technical factors,natural and physical forces, political and legal forces, social factors and cultural forces.												

UNIT 4: Choice under uncertainty	CO3	08 Hours
Background and expected utility theory; prospect theory and other theories; reference points; loss aversion; marginal utility; decision and probability weighting; applications – ownership and trade, income and consumption, performance in sports.		
UNIT 5: Intertemporal choice	CO3	08 Hours
Geometric discounting; preferences over time; anomalies of inter-temporal decisions; hyperbolic discounting; instantaneous utility; alternative concepts – future projection, mental accounts, heterogeneous selves, procedural choice; policy analysis – mobile calls, credit cards, organization of government; applications – consumption and savings, clubs and membership, consumption planning		
UNIT 6: Strategic choice	CO4	06 Hours
Review of game theory and Nash equilibrium – strategies, information, equilibrium in pure and mixed strategies, iterated games, bargaining, signaling, learning; applications – competitive sports, bargaining and negotiation, monopoly and market entry

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc. MSE:

Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Cyber Security****CO1****05 Hrs.**

Overview of Cybersecurity, Definition and Scope, Evolution of Cybersecurity, Concept of cyber security, Nature and scope of computer crime, Understanding how cyber criminals and hackers work, Different types of cyber-crimes, IT Act., Impact of cyber-crime on e-governance and e-commerce

Unit 2: Cyber Attacks & Malware Reverse Engineering**CO2****07 Hrs.**

Cyber Ethics: Threats, threat modeling, injections, sniffing, and types of attacks.

Security Vulnerabilities: risk, attack types, countermeasures

Protocol Vulnerabilities: DoS and DDoS, session hijacking, ARP spoofing.

Software Vulnerabilities: Phishing, buffer overflow, cross-site scripting attack, ransomware, SYN-flooding, SQL-injection, DNS poisoning

Overview of malware reverse engineering, Types of malware, Latest trends in malware analysis, Basic static and dynamic analysis, Malware analysis technique

Unit 3: Web Application and Social Media Security	CO3	08 Hrs.
Introduction to web application security: Attacks, vulnerabilities and mitigation, Client-side security, Server-side security, Application security: HTTPS, HSTS etc., Security engineering: Passwords and their limitations, Attacks on passwords: CAPTCHA, OTP, Introduction to Social networks , Types of Social media, Social media privacy, Challenges, opportunities and pitfalls in online social network, Security issues related to social media, Flagging and reporting of inappropriate content, Laws regarding posting of inappropriate content, Best practices for the use of Social media, Case studies		
Unit 4: Advanced Data Security	CO3	07 Hrs.
Secure email systems: PGP, SMIME, DKIM, DMARC, DNSSec, SMTP STS etc., Database security, Browser security, Mobile device security, Wireless Security, Wi-Fi Security Mechanisms, Bluetooth Security, Virtual Private Networks (VPNs), VPN Types and Protocols,		
Unit 5: Ethical Hacking and Penetration Testing	CO3	08 Hrs.
Security Technologies: Firewalls, IDS & IPS, Ethical hacking, Penetration Testing: Difference from automated vulnerability scans, objectives and limitations of a pen test, scoping and planning pen tests, executing pen tests and managing findings, Introduction to SDL (Secure Development Lifecycle), Tools for Secure Software Development		
Unit 6 : Case studies	CO4	05 Hrs.
Cloud security, Operating system security, Security of social networking websites, IoT devices security, E -commerce websites security.		
Textbooks:		
1. "Cybersecurity Essentials" by William Stallings and Lawrie Brown. 2. "Cybersecurity for Beginners" by Raef Meeuwisse, 2nd Edition, Cyber Simplicity, 2017.		
References:

Title of the Course: Business Communication & Value Science –IV						L	T	P	Credit				
Course Code: UCBAE0503						2	0	0	2				
Course Pre-Requisite: Basic Knowledge of English (verbal and written)													
Completion of all units from Semester 1, 2 and 4 courses: BCVS-I , BCVS II and BCVS III													
Course Description: This course will help students to explore essential skills for personal and professional growth, including emotional intelligence, effective communication, corporate social responsibility, time management, stress management, and feedback strategies.													
Course Learning Objectives:													
1. Identify and apply the key aspects of communicative writing in real life scenarios													
2. Understand emotional intelligence in personal and professional lives.													
3. Identify Public Speaking with the best practices at workplace													
4. Illustrate the attributes needed to function and grow in a corporate environment.													
Course Outcomes:													
CO		After the completion of the course the student should be able to						Bloom’s Cognitive					
								Level		Descriptor			
CO1		Identify and apply the key aspects of communicative writing in real life scenarios.						2		Understand			
CO2		Understand emotional intelligence in personal and professional lives.						3		Apply			
CO3		Identify Public Speaking with the best practices at workplace						4		Analyze			
CO4		Analyze the attributes needed to function and grow in a corporate environment.						4		Analyze			
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1								1		2	2		
CO2								2		2	3		
CO3								2		3	3		
CO4								3		3	2		

Assessments:												
Teacher Assessment:												
Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.												
<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ISE-1</td><td>10</td></tr><tr><td>MSE</td><td>30</td></tr><tr><td>ISE-2</td><td>10</td></tr><tr><td>ESE</td><td>50</td></tr></table>			Assessment	Marks	ISE-1	10	MSE	30	ISE-2	10	ESE	50
Assessment	Marks											
ISE-1	10											
MSE	30											
ISE-2	10											
ESE	50											
ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.												
MSE: Assessment is based on 50% of course content (Normally first three modules)												
ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.												
Course Contents:												
Unit 1: Communicative writing	CO1,CO2	05Hrs.										
Key aspects and principles of communicative writing, formal and business letters, writing winning business proposals, using charts and graphs in communicative writing and how to tell a story with charts and graphs, writing SOP, professional profile building- LinkedIn												
Unit 2: Emotional Intelligence	CO2,CO3	04 Hrs.										
Emotional intelligence, its importance in personal and professional lives, 10 Ways to build EI by Daniel Goleman.												
Unit 3: Public speaking and presentations at workplace	CO3	06Hrs.										
Need of public speaking at your workplace (YouTube videos of Swami Vivekananda’s Chicago speech, Steve Jobs’ first iPhone launch, Martin Luther King Jr (I have a dream...), J K Rowling commencement speech address 2008, APJ Abdul Kalam, Any regional speakers), best practices of public speaking, public speaking in real life scenarios.												

Unit 4: Importance of Corporate Social Responsibility (CSR)	CO2	05 Hrs.
Importance of corporate social responsibility (CSR)- some of the stalwarts in CSR, attributes needed to function and grow in a corporate environment (Who am I?), the best practices to share and receive feedback.		
Unit 5: Conflicts and Stress in life and work	CO3	06 Hrs.
The impact of conflicts, basic guidelines required to manage conflicts, the impact of stress in life and work, the best practices to manage stress, importance of time management in life and work, the best time management practices.		
Unit 6: Corporate etiquette and corporate terms	CO4	04 Hrs.
Key features of corporate etiquette, netiquette, email-etiquette and standards for online writing, cell phone & telephone etiquette, business idioms and corporate terms.		
Reference Books:		
1. Emotional Intelligence: Why it Can Matter More Than IQ by Daniel Goleman. 2. Putting Emotional Intelligence to Work by Ryback David. 3. How to Develop Self Confidence and Improve Public Speaking - Time - Tested Methods of Persuasion by Dale Carnegie

Title of the Course: Design and Analysis of Algorithms Laboratory		L	T	P	Credit								
Course Code: UCBPC0531		-	-	2	1								
Course Pre-Requisite: Basic knowledge of Data Structures and Algorithms													
Course Description: This course introduces the concept of algorithm as a precise mathematical concept, and study how to design algorithms, establish their correctness, study their efficiency and memory needs.													
Course Learning Objectives:													
1.To demonstrate performance of algorithms with respect to time and space complexity.													
2. To explain graph and tree traversals.													
3. Provide hands-on experience with implementing and testing algorithms using programming languages.													
Course Outcomes:													
CO	After the completion of the course the student should be able to	Bloom’s Cognitive											
		Level	Descriptor										
CO1	Identify various Time and Space complexities of various algorithms.	2	Understand										
CO2	Apply graph-based, greedy approaches to problem solving	4	Analyze										
CO3	Apply Dynamic Programming & Backtracking techniques to solve various problems.	4	Analyze										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	2	3	3									2	2
CO2	-				2							2	2
CO3	2	3	3		2							2	2

Assessments:								
Teacher Assessment:								
One component of In Semester Evaluation (ISE) and one End Semester Examination (ESE) having 50%, and 50% weight respectively.

Assessment	Marks							
ISE	25							
ESE	50							
ISE are based on practical performance/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc. ESE: Assessment is based on oral examination								
Course Contents:								
Experiment No.1: Implement and Analysis factorial of a number program using iterative and recursive methods.	CO1	02 Hrs.						
Experiment No. 2: Implement and compare different sorting algorithms. - Quick Sort & Merge Sort.	CO1	02 Hrs.						
Experiment No. 3: Implement and understand various searching techniques- Linear Search & Binary Search	CO1	02 Hrs.						
Experiment No. 4: Implement and understand basic graph algorithms. - Depth-First Search (DFS), Breadth-First Search (BFS)	CO2	02 Hrs.						
Experiment No.5: Implement and understand greedy algorithm techniques. - -Fractional Knapsack problem & Huffman coding	CO2	02 Hrs.						
Experiment No. 6: Implementation Of the algorithms of Kruskal and Prim	CO2	02 Hrs.						
Experiment No. 7: Implementation of Dijkstra’s Algorithm,	CO2	02 Hrs.						
Experiment No. 8: Implement & and understand dynamic programming techniques- Fibonacci sequence, Longest Common Subsequence (LCS)	CO3	02 Hrs.						
Experiment No. 9: Understand and implement Backtracking techniques with N-Queens Problem.	CO3	02 Hrs.						
Experiment No. 10: Study of static code analysis tools for C and Java languages. e.g., Clang Static Analyzer, Cppcheck, SpotBugs (formerly FindBugs), PMD etc.	CO2, CO3	02 Hrs.						

Textbooks:

1. Thomas Cormen, Charles Leiserson, Ronald Rivest and Clifford Stein, “Introduction to Algorithms”, PHI
2. Fundamentals of Computer Algorithms - Ellis Horowitz, Satraj Sahani, Saguthevar Rajasejaram, Universities Press, Second Edition.

References:

1. Fundamentals of Algorithmics – Gilles Brassard, Paul Bratley (Pearson Education).
2. Mastering Algorithms with C – Kyle Loudon (SPD O’Reilly).
3. Computer Algorithms- Introduction to Design and Analysis – Sara Baase, Allen Van Gelder (Pearson Education).

Title of the Course: Compiler Design (LEX & YACC) Laboratory		L	T	P	Credit								
Course Code: UCBPC0532		-	-	2	1								
Course Prerequisite: Fundamentals of Computer Science													
Course Description: This course is designed to understand basic building blocks of a compiler and explains the interaction between lex and yacc.													
Course Learning Objectives:													
1: Students will be able to demonstrate scanning process using lex and yacc tool													
2: Students will be able to demonstrate the lexical analysis process and semantic analysis process													
3: Students will be able to demonstrate LL and LR parser functionalities													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom's Cognitive										
			Level	Descriptor									
CO 1	Use lex and yacc tools for developing a scanner and a parser.		2	Understand									
CO 2	Understand Lexical analyzer and use this knowledge to implement its various sub-functions for any regular language.		3	Apply									
CO 3	Examine string for the given regular expression and evaluate expressions using YACC Tool.		4	Analyze									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	1	2	2	-	2							2	1
CO2	1	2	2	2	2							2	1
CO3	1	2	2	2	2							2	

Assessments:								
Teacher Assessment:								
One component of In Semester Evaluation (ISE) and one End Semester Examination (ESE) having 50%, and 50% weights respectively.								
<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ISE</td><td>25</td></tr><tr><td>ESE</td><td>50</td></tr></table>			Assessment	Marks	ISE	25	ESE	50
Assessment	Marks							
ISE	25							
ESE	50							
ISE are based on practical performance/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc. ESE: Assessment is based on Practical & oral examination								
Course Contents:								
Experiment No. 1:	CO-1	02 Hrs.						
Study of LEX and YACC								
Experiment No. 2:	CO-2	02 Hrs.						
Write Lex Program to Identify and Count Number of Vowels and Consonants from a Given Input String								
Experiment No.3:	CO-2	02 Hrs.						
Write a Lex Program to Identify Letter and Word from a Given Input String								
Experiment No. 4:	CO-2	02 Hrs.						
Write a Lex Program to Identify Positive Number, Negative Number, Positive Fraction Number and Negative Fraction Number from a Given Input String								
Experiment No. 5:	CO-2	02 Hrs.						
Write a Lex Program to Convert Printf and Scanf Statements into Write and Read using File Handling Concept.								
Experiment No. 6:	CO-2	02 Hrs.						
Write a Lex Program to Identify Positive Number, Negative Number, Positive Fraction Number and Negative Fraction Number Using File Handling Concept.								
Experiment No. 7:	CO-2	02 Hrs.						
Write a Lex Program to Identify Special Characters, Arithmetic Operators, and Digits from a Given Input String								

Experiment No. 8:	CO-3	02 Hrs.
Write a YACC Program to Convert Infix to Postfix Expression		
Experiment No. 9:	CO-3	02 Hrs.
Write a YACC Program to implement a Calculator and Recognize a Valid Arithmetic Expression.		
Experiment No. 10:	CO-3	02 Hrs.
Write a YACC Program to Check Whether the Given Input String is Palindrome or Not.		
Textbooks:		
1. Compilers: Principles, Techniques and Tools, Jeffery D. Ullman, Alfred V Aho, Ravi Sethi- Pearson Education India. 2. System Programming and Operating System, D. M. Dhamdhere, 2nd Edition-McGraw Hill Education India		
References:		
1. Compiler Construction, D.M. Dhamdare, Mc-Millan. 2. A Guide to Design and Analysis of Algorithms - Soubhik Chakraborty / prashant pranav / khatton / Dutta.		

Title of the Course: Modern Web Applications Laboratory		L	T	P	Credit								
Course Code: UCBPC0533		0	0	2	1								
Course Pre-Requisite: Enable students to develop modern web application.													
Course Description: This course contains basic concepts related to designing and development of web pages. Also this course gives brief knowledge on various tools and technologies used for web designing.													
Course Learning Objectives:													
1. To enable students to develop modern web applications by leveraging the latest technologies. 2. To build a strong foundation in students making them job ready as per industry requirements. 3. To enable them to learn new technologies by applying foundation paradigms 4. To build strong expertise to develop end to end applications - web frontend and backend development.													
Course Outcomes:													
CO	After the completion of the course the student should be able to	Bloom’s Cognitive											
		Level	Descriptor										
CO1	Build Design and Develop Web Applications	6	Create										
CO2	Create Design applications by utilizing frontend frameworks.	6	Create										
CO3	Design Integrate Backend Services & database integrated web applications	6	Create										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1		2	3		3		2				2	2	2
CO2		2	3		3		2				3	3	3
CO3		2	3		3		2				3	3	3

Assessments :								
Teacher Assessment:								
One component of In Semester Evaluation (ISE) having 100% weights.								
<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ISE</td><td>25</td></tr><tr><td>ESE</td><td>--</td></tr></table>			Assessment	Marks	ISE	25	ESE	--
Assessment	Marks							
ISE	25							
ESE	--							
ISE are based on practical performed/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc.								
Course Contents:								
Experiment No. 1:	CO1,CO2,CO3	02 Hrs.						
Design the following static web pages required for an online bookstore web site.								
1) HOME PAGE: The static home page must contain three frames.								
2) LOGIN PAGE								
3) CATALOGUE PAGE: The catalogue page should contain the details of all the books available in the web site in a table.		02 Hrs.						
4) REGISTRATION PAGE								
Experiment No. 2:	CO1,CO2,CO3							
Write JavaScript to validate the following fields of the Registration page.								
1. First Name (Name should contains alphabets and the length should not be less than 6 characters).		02 Hrs.						
2. Password (Password should not be less than 6 characters length).								
3. E-mail id (should not contain any invalid and must follow the standard pattern name@domain.com)								
4. Mobile Number (Phone number should contain 10 digits only).								
5. Last Name and Address (should not be Empty).		02 Hrs.						
Experiment No. 3:	CO1,CO2,CO3							
Develop and demonstrate the usage of inline, internal and external style sheet using CSS								

Experiment No. 4: Develop and demonstrate JavaScript with POP-UP boxes and functions for the following problems: a) Input: Click on Display Date button using onclick() function Output: Display date in the textbox b) Input: A number n obtained using prompt Output: Factorial of n number using alert c) Input: A number n obtained using prompt Output: A multiplication table of numbers from 1 to 10 of n using alert d) Input: A number n obtained using prompt and add another number using confirm Output: Sum of the entire n numbers using alert	CO1,CO2,CO3	02 Hrs.
Experiment No.5: Build HTML page that contains a selection box with a list of 5 countries. When the user selects a country, its capital should be printed next in the list. Add CSS to customize the properties of the font of the capital (color,bold and font size).	CO1,CO2,CO3	02 Hrs.
Experiment No. 6: Write an HTML page including any required JavaScript that takes a number from text field in the range of 0 to 999 and shows it in words. It should not accept four and above digits, alphabets and special characters.	CO1,CO2,CO3	02 Hrs.
Experiment No. 7: Create an XML document that contains 10 users information. Write a Java Program, which takes User Id as input and returns the user details by taking the user information from XML document using DOM parser or SAX parser.	CO1,CO2,CO3	02 Hrs.
Experiment No. 8: Create the web applications with Database using (a) JSP, (b) Servlets and (c) JSP. (i) Write a jsp Program to display current Date, Time and Day. (ii) A web application that takes name and age from an HTML page. If the age is less than 18, it should send a page with “Hello, you are not authorized to visit the site” message, where it should be replaced with the entered name. Otherwise it should send “Welcome to this site” message. (iii) write a program for deploying Java Beans in a jsp page.	CO1,CO2,CO3	02 Hrs.
Experiment No. 9: Write a program to design a simple calculator using (a) JavaScript (b) Servlet and (c) JSP.	CO1,CO2,CO3	02 Hrs.
Experiment No. 10: Write a program on stock market.	CO1,CO2,CO3	02 Hrs.

Title of the Course: Business Communication and Value Science-IV Lab										L	T	P	Credit
Course Code: UCBAE0534										0	0	2	1
Course Pre-Requisite: Business Communication and Value Science-IV Theory													
Course Description: This course will help students to explore essential skills for personal and professional growth, including emotional intelligence, effective communication, corporate social responsibility, time management, stress management, and feedback strategies.													
Course Learning Objectives:													
1. To apply communicative writing in real life scenarios. 2. To apply public speaking in real life scenarios. 3. To understand the attributes needed to function and grow in a corporate environment. 4. To analyze the social issues around and provide solutions.													
Course Outcomes:													
CO	After the completion of the course the student should be able to									Bloom's Cognitive			
										Level	Descriptor		
CO1	Understand the attributes needed to function and grow in a corporate environment.									1	Understand		
CO2	Apply communicative writing in real life scenarios.									2	Apply		
CO3	Apply public speaking in real life scenarios.									3	Apply		
CO4	Analyze the social issues around and provide solutions									4	Analyze		
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1								2		2	2		
CO2								2		3	2		
CO3								2		3	2		
CO4								2		3	2		

Assessments:**Teacher Assessment:**

One component of In Semester Evaluation (ISE) and one End Semester Examination (ESE) having 50%, and 50% weights respectively.

Assessment	Marks
ISE	25
ESE	--

ISE are based on practical performed/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc. ESE: Assessment is based on oral examination

Course Contents:

Experiment No. 1: Writing proposals - Create a business proposal to get funding to begin a start-up of their choice. Represent information with charts and graphs.	CO1	02 Hrs.
Experiment No. 2: Each group to create a POC (Proof of Concept) for their start-up applying their learnings from the CSBS course (core subjects + BCVS). The POC will be evaluated by the TCS team at the end of the term.	CO1,CO2	02 Hrs.
Experiment No. 3: A short video/movie clip showing manifestations of EI. Discuss and Present the findings on the students with higher EQ who write better exam papers.	CO1,CO3	02 Hrs.
Experiment 4 : Public speaking – Group presentations on the list of best practices along with examples Get, Set, Go – sell your start-up ideas : Each group to pitch their start-up idea.	CO2,CO3	02 Hrs.
Experiment 5 : CSR stories, Group Activity - Research , prepare and present CSR activity of Tata Steel, Microsoft, Google, TCS, Starbucks, Titan, Tata Chemicals and TOMS Shoes.	CO1,CO2	02 Hrs.

Experiment 6 :	CO1,CO2	02 Hrs.
Conflict resolution: Each group will enact the situation of typical conflicts that occurs in a corporate office , to draw up a list of tips to manage conflicts at work and share on their FB/Insta/LinkedIn/Blog page.		
Experiment 7:	CO3,CO4	02 Hrs.
Stress management: Each group will present their posters and the class will come up with a list of stress management tips to be put up on the Fb/Insta page.		
Experiment 8:	CO1,CO2	02 Hrs.
Managing your time better: Start with the YouTube video: A valuable lesson for a happy life (2:33 mins) After viewing this, the facilitator will ask the participants to identify the rocks, pebbles and sands in their life.		
Experiment 9:	CO2,CO3	02 Hrs.
Mock interview rounds for each group with a prospective employer followed by discussions on corporate etiquette.		
Experiment 10:	CO3,CO4	02 Hrs.
Quiz in which in the first four rounds each group needs to identify the business idioms and corporate terms from given experts. In the next four rounds they will be asked to supply the correct idiom or term in a given business scenario.		
Experiment 11:	CO3,CO4	02 Hrs.
Evaluation of POC (Proof of Concept) for their start-up Create memories: Recap activity on the entire BCVS Course.

Title of the Course: Business Strategies	L	T	P	Credit
Course Code: UCBMM0541	3	-	-	3

Course Pre-Requisite: Overview of business organizations and their operations and challenges faced by them.

Course Description: This course enables the learners to understand new forms of Strategic Management concepts and their use in business. The course helps the students understand the internal and external environments of firms and prepare a competitive strategy for industry attractiveness. The syllabus emphasizes corporate strategy and its implementation. In addition, the learners will also be acquainted with recent developments and trends in the business world.

Course Learning Objectives:

1. Understand current management concepts of strategic management.
2. Understand Pre-requisite and process of strategy formulation.
3. Differentiate between various generic strategies used in business.
4. Analyze the role of make in India in economy.

Course Outcomes:

CO	After the completion of the course the student should be able to	Bloom's Cognitive	
		Level	Descriptor
CO1	Remember the fundamental concepts of strategic management to analyze business situations and apply these concepts to solve business problems.	1	Remember
CO2	Understand the fundamental principles of and interrelationships among business functions such as: R&D, production, marketing, finance, HR and information technology.	2	Understand
CO3	Identify the inter-relationships of business to individuals, other organizations, government, and society.	3	Analyze
CO4	Analyze complex, unstructured qualitative and quantitative problems using appropriate tools.	3	Analyze

<table><tr><td>Assessment</td><td>Marks</td></tr><tr><td>ESE</td><td>100</td></tr></table>			Assessment	Marks	ESE	100
Assessment	Marks					
ESE	100					
ESE: Assessment is based on 100% course content.						
Course Contents:						
Unit 1: Introduction to Strategic Management	CO1	7 Hours				
Importance of Strategic Management, Vision and Objectives, Schools of thought in Strategic Management, Strategy Content, Process, and Practice, Fit Concept and Configuration Perspective in Strategic Management.						
Unit 2: Internal Environment of Firm	CO1	8 Hours				
Core Competence as the Root of Competitive Advantage, Sources of Sustained Competitive Advantage, Business Processes and Capabilities-based Approach to Strategy.						
Unit 3: External Environments of Firm	CO2	10 Hours				
Five Forces of Industry Attractiveness that Shape Strategy, The concept of Strategic Groups, and Industry Life Cycle, Generic Strategies, Generic Strategies, and the Value Chain.						
Unit 4: Corporate Strategy, and Growth Strategies	CO3	7 Hours				
The Motive for Diversification, Related and Unrelated Diversification, Business Portfolio Analysis, Expansion, Integration and Diversification, Strategic Alliances, Joint Ventures, and Mergers & Acquisitions.						
Unit 5: Strategy Implementation: Structure and Systems	CO3	4 Hours				
The 7S Framework, Strategic Control and Corporate Governance.						
Unit 6: Emerging Strategic Trends	CO4	9 Hours				
Business Process Outsourcing and Knowledge Process Outsourcing in India: Concept and Strategies. Start-up Business Strategies and Make in India Model: Process of business start-ups and its Challenges, Growth Prospects, and government initiatives in Make in India Model with reference to National manufacturing.

Title of the Course: Computer Networks		L	T	P	Credit																																																																						
		3	0	0	3																																																																						
Course Code: UCBPC0601																																																																											
Course Pre-Requisite: Basic knowledge of Data Communication System.																																																																											
Course Description: The course introduces main concepts of networking; application areas; classification; reference models, transmission environment; technologies; routing algorithms.																																																																											
Course Learning Objectives:																																																																											
1. To equip the students with a general overview of the concepts and fundamentals of computer networks. 2. To introduce fundamentals of networking concepts with the help of layered architecture which includes OSI and TCP/IP model. 3. Familiarize the students with packet tracing and analyzing tools. 4. To aware the students about various routing algorithms.																																																																											
Course Outcomes:

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:

Unit 1: Data Communication and Networking Overview	CO1	06 Hours
---	------------	-----------------

Communication model, Data Communication and Networking-Types of Network and Topology, Network Devices: -Hub, Switch, Bridge, Router, Repeater, Modem, NIC etc.

Unit 2: Data Transmission	CO1	08 Hours
----------------------------------	------------	-----------------

Concepts and terminology, Analog and Digital Data Transmission, Transmission Impairments, Channel Capacity, Guided Transmission Media and Wireless Transmission.

Unit 3: Protocol Architecture Model	CO2	08 Hours
--	------------	-----------------

Protocol Layers, Hierarchy, Layered Architecture, Overview of OSI Model, Overview of TCP/IP Model, Comparison between OSI and TCP/IP Protocol suite, Addressing:- Unicast, Multicast and Broadcast.

Unit 4: Data Link Layer	CO3	08 Hours
--------------------------------	------------	-----------------

Design issues for Data Link Layer, Framing Methods:- Bit, Byte and Character Stuffing, Error Detection Methods:- CRC and Checksum. Error Correction Method:-Hamming Code, Flow Control Noisy and Noiseless Protocols:-Stop and Wait, Sliding Window, Go Back N, Selective Repeat.

Unit 5: Network Layer	CO3	08 Hours
------------------------------	------------	-----------------

Network layer services, Addressing: - Classful Addressing/ Classless Addressing, IP packet format, Routing Algorithms:- Shortest path routing,, Distance Vector routing, Link state routing, Flooding, Introduction to ARP, RARP, ICMP,IGMP

Unit 6: Application Layer	CO4	07 Hours
----------------------------------	------------	-----------------

DNS, DDNS, TELNET, EMAIL, FTP, WWW, HTTP, SNMP

Title of the Course: Machine Learning		L	T	P	Credit								
Course Code: UCBPC0602		3	0	0	3								
Course Pre-Requisite: Linear Algebra and Statistics													
Course Description: This Course is designed to understand and implement the various machine algorithms. Also, this course provides insights of solving various applications using ML modeling.													
Course Learning Objectives:													
1. To describe the fundamentals of machine learning concepts. 2. To analyze supervised and Unsupervised algorithms of machine learning. 3. To apply the algorithms to solve problems. 4. To analyze the real-world applications of machine learning.													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom's Cognitive										
			Level	Descriptor									
CO1	Describe the fundamentals of machine learning concepts.		2	Understand									
CO2	Analyze supervised and Unsupervised algorithms of machine learning.		3	Analyze									
CO3	Apply the algorithms to solve problems		3	Apply									
CO4	Analyze the real-world applications of machine learning.		4	Analyze									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2

CO3	2	1	1	3	3							2	2
CO4			1		2								

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Machine Learning****CO1****07 Hrs.**

Introduction to machine learning – definition, terminology. Types of machine learning – supervised learning, unsupervised learning, semi-supervised learning, reinforcement learning. Machine learning process. Performance metric in machine learning. Tools and frameworks. Data preprocessing (overview). Data visualization.

Unit 2: Regression**CO2, CO3****08 Hrs.**

Simple linear regression – hypothesis, cost function, parameter learning with gradient descent, learning rate, gradient descent for linear regression, examples. Simple linear regression in matrix form. Multivariate linear regression – multiple features, hypothesis functions. Gradient descent for multiple variables, feature scaling, polynomial regression.

Unit 3: Classification**CO2, CO3****08 Hrs.**

Logistic Regression-cost function, gradient descent and Multiclass classification, Decision trees – definition, terminology, the need, advantages, and limitations. Constructing and understanding decision trees. Decision tree algorithms – ID3, CART, random forest, examples. Naïve Bayes classifier. K-Nearest Neighbour classifier. Model Evaluation

Unit 4 : Neural Networks and Support Vector Machine	CO2, CO3	08 Hrs.
neuron representation and model, hypothesis for neuron, cost function, solution of a problem using single neuron, gradient descent for a neuron. Multiclass classification with neural network. Learning in neural networks – feedforward neural network, backpropagation algorithm. Loss function – support vector machines (SVMs), softmax regression .		
Unit 5 : Unsupervised Learning and Reinforcement Learning	CO2,CO3	08 Hrs.
Unsupervised learning: Introduction to clustering, K Means clustering, Hierarchical clustering, Association rule mining. Introduction to reinforcement learning – Q learning.		
Unit 6 : Case Studies of Machine Learning	CO4	06 Hrs.
Introduction to machine learning libraries, applications in structured data, applications in unstructured data – Image, Text, Speech.		
Textbooks:		
1. Abhishek Vijayvargia, BPB publications, Machine Learning with Python - an approach to applied ML . 2. Tom M. Mitchell, McGraw Hill Education; First edition Machine Learning

Title of the Course: Design Thinking										L	T	P	Credit
Course Code: UCBPC0603										3	0	0	3
Course Pre-Requisite: Basic concepts of computer science.													
Course Description: The course aims to provide knowledge about different design techniques, its implementation, and testing.													
Course Learning Objectives:													
1. To understand design thinking and its phases													
2. To Apply Empathy Techniques.													
3. To apply ideation and prototyping to design a solution model.													
4. Analyze the design model concerning its future scope.													
Course Outcomes:													
CO	After the completion of the course, the student should be able to									Bloom’s Cognitive			
										Level	Descriptor		
CO1	Understand design thinking and its phases.									2	Understand		
CO2	Apply Empathy techniques to understand user needs.									3	Apply		
CO3	Apply ideation and prototyping to design a solution model.									3	Apply		
CO4	Analyze the design model concerning its future scope.									4	Analyze		
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	1		2	1							1	2	1
CO2	1		2								1	2	1
CO3	2	2	2	2							1	2	2
CO4	1	2	2	2							1	1	2

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Design Thinking** **CO1** **08 Hrs.**

Why Design? - Four Questions, Ten Tools - Principles of Design Thinking - The process of Design Thinking - How to plan a Design Thinking project.

Unit 2: Empathize Phase **CO2** **7 Hours**

Empathize phase - Steps involved - Immersion activity- Questionnaire – Empathy map for case study.

Unit 3: Understand, Observe and Define The Problem **CO1** **8 Hours**

search field determination - Problem clarification - Understanding of the problem - Problem analysis - Reformulation of the problem - Observation Phase - Empathetic design - Tips for observing - Methods for Empathetic Design - Point-of-View Phase - Characterization of the target group - Description of customer needs..

Unit 4: Ideation And Prototyping **CO3** **8 Hours**

Ideate Phase - The creative process and creative principles - Creativity techniques - Evaluation of ideas - Prototype Phase - Lean Startup Method for Prototype Development - Visualization and presentation techniques.

Unit 5: Testing And Implementation	CO1, CO4	8 Hours
Test Phase - Tips for interviews - Tips for surveys - Kano Model - Desirability Testing - How to conduct workshops - Requirements for space - Material requirements - Agility for Design Thinking.		
Unit 6: Future	CO4	6 Hours
Design Thinking meets the corporation – The New Social Contract – Design Activism – Designing tomorrow. Case Study- Design Thinking principles in UI/UX Design.Design Tool- Figma.		
Textbooks:

Title of the Course: Information Security		L	T	P	Credit								
Course Code: UCBPC0604		2	0	0	2								
Course Prerequisite: Computer Network, Data Communication, Engg. Mathematics													
Course Description: This course gives you a practical survey of both the principles and practice of cryptography and network security. In the first part of course, the basic issues to be addressed by a network security capability are explored by providing a tutorial and survey of cryptography and network security technology. The later part of course deals with the practice of network security: practical applications that have been implemented and are in use to provide network security.													
Course Learning Objectives:													
1. To explain the use of Cryptographic algorithms to ensure data protection and integrity 2. To apply the knowledge of cryptographic techniques to solve the problems on security 3. To illustrate the different Network and Internet security protocols in TCP/IP stack 4. To analyze the security facilities designed to provide system security													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom's Cognitive										
			Level	Descriptor									
CO1	Explain the use of Cryptographic algorithms to ensure data protection and integrity.		2	Understand									
CO2	Apply the knowledge of cryptographic techniques to solve the problems on security.		3	Apply									
CO3	Analyze the security facilities designed to provide system security		4	Analyze									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO 4	PO5	PO 6	PO 7	PO 8	PO9	PO1 0	PO1 1	PSO1	PSO2
CO1	2											2	2
CO2	2	3	3		2							2	2
CO3		2	2		2							2	2

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Information Security****CO1****05 Hrs.**

Computer Security Concepts, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Network Security, Symmetric Cipher Model, Substitution Techniques.

Unit 2: Symmetric and Asymmetric Key Cryptography**CO1****06 Hrs.**

Block Cipher Structure, Data Encryption Standard (DES), A DES Example, Strength of DES, Block Cipher Design Principles, AES Structure, Multiple Encryption and Triple-DES, Principles of Public- Key Cryptosystems, RSA Algorithm, Other Public key Cryptosystems - Diffie-Hellman Key Exchange.

Unit 3: Cryptographic Authentication Functions**CO2****06 Hrs.**

Applications of Cryptographic Hash Functions, Two Simple Hash Functions, Requirements and Security, Hash Functions Based on Cipher Block Chaining, Secure Hash Algorithm (SHA), Message Authentication Requirements, Message Authentication Functions, Requirements for MAC and Security of MACs, MACs Based on Hash Functions: MAC, MACs Based on Block Ciphers: DAA and CMAC, Digital Signatures, Digital Signature Standard (DSS).

Unit 4 :Key Management and User Authentication	CO3	04 Hrs.
Symmetric Key Distribution Using Symmetric Encryption, Symmetric Key Distribution Using Asymmetric Encryption, Distribution of Public Keys, Public Key Infrastructure, Remote User-Authentication Principles, Kerberos.		
Unit 5 :Internet security Protocols	CO2	05 Hrs.
Secure Sockets Layer (SSL), Transport Layer Security (TLS), HTTPS, SSH, Pretty Good Privacy (PGP), S/MIME, IP Security Overview, IP Security Policy, Encapsulating Security Payload.		
Unit 6 :Firewall and Intrusion detection system	CO3	04 Hrs.
Introduction, Types of firewall, Firewall configuration, VPN, Types of VPN, Overview of IDS, IDS Components, Approaches of IDS.		
Textbooks:

Title of the Course: Software Design with UML											L	T	P	Credit
Course Code: UCBPE0611											3			3
Course Pre-Requisite: Fundamentals of Software Development Life Cycle Process, Object Oriented Concepts.														
Course Description: This course to study about SDLC modeling techniques using UML diagrams and also understand the object-oriented approach to analyzing and designing systems and software solutions.														
Course Learning Objectives:														
1. To Understanding UML Fundamentals.														
2. To acquaint themselves with the Object-Oriented Analysis and Design (OOAD) with UML.														
3. To use Modeling System Behavior with UML Diagrams.														
4. To use different Designing tools for Modeling.														
Course Outcomes:														
CO	After the completion of the course the student should be able to										Bloom's Cognitive			
											Level	Descriptor		
CO1	Understand the concepts and principles of object oriented programming concepts and the software development process models										2	Understand		
CO2	Make use of static and dynamic UML diagrams for solving design solutions										3	Apply		
CO3	Analyze the design methods and modeling techniques.										4	Analyze		
CO4	Design UML diagrams for real time problems.										4	Analyze		
CO-PO Mapping:														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	
CO1	1	1									1	2	1	
CO2	1	1	2	1							1	2	2	
CO3		1	2	2				1			2	2	2	
CO4			3	2	2		2	1			2	2	2	

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Object Oriented Software Engineering and UML CO1 8 Hours**

Software development process: The Waterfall Model vs. The Spiral Model, The Software Crisis, description of the real world using the Objects Model, Classes, inheritance and multiple configurations, Quality software characteristics, Description of the Object Oriented Analysis process vs. the Structure Analysis Model.

Unit 2: Introduction to the UML Language. CO1 7 Hours

Standards, Elements of the language, General description of various models, The process of Object-Oriented software development. Description of Design Patterns. Technological Description of Distributed Systems.

Unit 3: Requirement Analysis and Design CO2 7 Hours**Requirements Analysis Using Case Modeling:**

Analysis of system requirements. Actor definitions, writing a case goal, Use Case Diagrams, Use Case Relationships.

Design (Interaction Diagrams): Description of goal, Defining UML Method, Operation, Object Interface, Class. Sequence Diagram. Finding objects from Flow of Events. Describing the process of finding objects using a Sequence Diagram. Describing the process of finding objects using a Collaboration Diagram.

Unit 4: Static and Package Diagram Model	CO2	8 Hours
The Logical View Design Stage: The Static Structure Diagrams. The Class Diagram Model, Attributes descriptions, Operations descriptions, Connections descriptions in the Static Model, Association, Generalization, Aggregation, Dependency, Interfacing, Multiplicity. Package Diagram Model: Description of the model, White box, black box, Connections between packagers, Interfaces, Create Package Diagram, Drill Down.		
Unit 5: Dynamic and Component Diagrams	CO2	8 Hours
Description of the State Diagram, Events Handling, Description of the Activity Diagram, Physical Aspect, Logical Aspect, Connections and Dependencies, User face, Initial DB design in a UML environment.		
Unit 6: Deployment Model	CO3	7 Hours
Processors, Connections, Components, Tasks, Threads, Signals and Events, Case Studies.

Title of the Course: Financial Management										L	T	P	Credit
Course Code: UCBPE0613										3	-	-	3
Course Pre-Requisite: Overview of business organizations and their operations and challenges faced by them.													
Course Description: The course helps the students to know the Financial Management concept in decision making													
Course Learning Objectives:													
1. To familiarize the students with basic concepts of financial management. 2. To understand the concept of time value of money and its uses. 3. To enable students to rank different projects using capital budgeting. 4. Familiarize with working capital management.													
Course Outcomes:													
CO	After the completion of the course the student should be able to									Bloom's Cognitive			
										Level	Descriptor		
CO1	Remember the fundamental concepts of financial management and Estimate time value of money.									1	Remember		
CO2	Understand working capital management, cost of capital and cash management.									2	Understanding		
CO3	Apply the capital budgeting techniques and evaluate the investment decisions.									3	Apply		
CO4	Leverage the concept for deciding the financial angle of IT projects.									4	Analyze		
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2

CO3			2		2					1			2
CO4				3									

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
ISE-2	10
MSE	30
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**UNIT 1: INTRODUCTION****CO1****06 Hours**

Financial Management- Introduction, Meaning, Objectives- Profit Maximization and Wealth Maximization approach, Scope of financial management, Functions of Financial Management.
Sources of Finance: Short Term Sources, Medium Term Sources & Long Term Sources of Finances

UNIT 2: TIME VALUE OF MONEY**CO1****06 Hours**

Simple and Compound Interest Rates, Time Lines and Notation, Future Value of a Single Amount, Future value of uneven cash flow, Future Value of an Annuity .Present Value of a Single Amount, Present value of uneven cash flow , Present Value of an Annuity.

UNIT 3: CAPITAL BUDGETING**CO3****08 Hours**

Capital Budgeting : Capital Budgeting Concept , Nature & Significance of Capital Budgeting ,Capital Budgeting Techniques, Project Evaluation and Selection - Alternative Methods.

UNIT 4: LEVERAGE	CO4	06 Hours
Operating & Financial Leverage: Operating Leverage, Financial Leverage, Total Leverage, and Indifference Analysis in leverage study.		
UNIT 5: WORKING CAPITAL MANAGEMENT	CO2	12 Hours
Concept of working capital, Working Capital Cycle ,Types of Working capital, Use and Importance of Working Capital, Influencing Factors, Estimation of Working Capital		
UNIT 6: COST OF CAPITAL AND CASH MANAGEMENT	CO2	07 Hours
Cost of Capital: Concept, Computation of Specific Cost of Capital for Equity - Preference – Debt, Weighted Average Cost of Capital – Factors affecting Cost of Capital.		
Cash Management: Introduction, Functions, Objectives, Importance and Motives of Holding Cash.		
Home Assignment:		
Simple Illustration on Capital Budgeting and Working Capital Management.		
Textbooks:		
Chandra, Prasanna - Financial Management - Theory & Practice, Tata McGraw Hill..

Title of the Course: Industry 4.0 Course Code: UCBOE0621		L	T	P	Credits								
		3	-	-	3								
Course Prerequisite: A basic understanding of engineering principles, digital technologies, data analytics and business processes.													
Course Description: This course provides an overview of Industry 4.0, exploring its core concepts, the evolution of smart manufacturing systems and gain insight into the technological advancements such as robotics, augmented reality, and the Internet of Things to understand the challenges and strategies for adopting Industry 4.0 in real-world industrial settings.													
Course Learning Objectives:													
1. To understand concepts, technologies, and current state of Industry 4.0 2. To Analyze the components, frameworks, and supportive technologies enabling Industry 4.0 3. To Develop strategic technology roadmaps for adopting Industry 4.0 innovations in production. 4. To Identify and address challenges and obstacles in implementing Industry 4.0 systems.													
Course Outcomes:													
COs	After the completion of the course the student will be able to		Bloom's Cognitive										
			Level	Descriptor									
CO1	Describe Industry 4.0 and scope for Indian Industry		2	Understand									
CO2	Demonstrate conceptual framework and road map of Industry 4.0		2	Understand									
CO3	Discover Robotic technology and Augmented reality for Industry 4.0		4	Analyze									
CO4	Discover obstacle and framework conditions for Industry 4.0		4	Analyze									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	-	-	-	1	1	2	-	2	2	1	2	1	2
CO2	-	3	3	2	2	2	-	3	3	2	3	2	3
CO3	-	2	3	2	2	1	-	2	3	1	2	2	2
CO4	-	3	2	2	1	2	-	2	2	2	2	2	2

Assessment Scheme:

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:**Unit 1: Introduction to Industry 4.0****CO1****8 Hours**

Introduction, core idea of Industry 4.0, origin concept of industry 4.0, Industry 4.0 production system, current state of industry 4.0, Core Technologies, How is India preparing for Industry 4.0

Unit 2: A Conceptual Framework**CO2****8 Hours**

Introduction, Main Concepts and Components of Industry 4.0, State of Art, Supportive Technologies, Proposed Framework for Industry 4.0

Unit 3: Technology Roadmap**CO2****8 Hours**

Introduction, Proposed Framework for Technology Roadmap, Strategy Phase, New Product and Process Development Phase.

Unit 4: Advances in Robotics**CO3****7 Hours**

Introduction, Recent Technological Components of Robots- Advanced Sensor Technologies, Internet of Robotic Things, Cloud Robotics, and Cognitive Architecture for Cyber-Physical Robotics, Industrial Robotic Applications- Manufacturing, Maintenance and Assembly.

Unit 5: The Role of Augmented Reality**CO3****8 Hours**

Introduction, AR Hardware and Software Technology, Industrial Applications of AR.

Unit 6: Obstacles and Framework Conditions	CO4	6 Hours
Lack of A Digital Strategy alongside Resource Scarcity, Lack of standards and poor data security, Financing conditions, availability of skilled workers, comprehensive broadband infrastructure, state support, legal framework, protection of corporate data, liability, handling personal data.		
Textbooks:		
1. Industry 4.0: Managing the Digital Transformation by Alp Ustundag and Emre Cevikcan, Springer. 2. The Concept Industry 4.0 by Bartodziej, Christoph Jan Bartodziej, Springer. 3.The Challenges of Industry 4.0 for Small and Medium-sized Enterprises by Christian Schroder. Springer.		
Reference Books:		
1. "Industry 4.0: The Industrial Internet of Things" by Alasdair Gilchrist, Apress, 1st Edition, 2016 2. The Fourth Industrial Revolution" by Klaus Schwab, Crown Business, 1st Edition,2016		

Title of the Course: Intellectual Property and Entrepreneurship		L	T	P	Credit								
Course Code: UCBOE0622		3	0	0	3								
Course Pre-Requisite: Basic knowledge of business, innovation, and legal principles related to intellectual property.													
Course Description: This course provides an in-depth understanding of Intellectual Property Rights (IPR) and its role in entrepreneurship. It covers various types of intellectual property (patents, copyrights, trademarks, trade secrets) and their significance in business innovation. The course also introduces entrepreneurial concepts, business models, startup ecosystems, financial, and ethical considerations in new ventures. Additionally, it explores the commercialization of intellectual property and technology transfer in industries.													
Course Learning Objectives:													
1. To understand the fundamental concepts of Intellectual Property Rights (IPR). 2. To differentiate between patents, copyrights, trademarks, and trade secrets. 3. To analyse entrepreneurial processes, business models, and startup ecosystems. 4. To evaluate financial, legal, and ethical aspects of entrepreneurship and intellectual property. 5. To explore technology commercialization and innovation management.													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom’s Cognitive										
			Level	Descriptor									
CO1	Explain the fundamentals of Intellectual Property Rights (IPR).		2	Understand									
CO2	Differentiate between patents, copyrights, trademarks, and trade secrets.		2	Understand									
CO3	Understand the commercialization of technology and its role in industry.		2	Understand									
CO4	Analyze the entrepreneurial process, business models, and startup ecosystems		4	Analyse									
CO5	Evaluate financial, legal, and ethical considerations in entrepreneurship		5	Evaluate									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	3				1			1				1	
CO2	3	1	2										1
CO3	1	3		3					1			1	
CO4					3	1	1	1					1
CO5	1		2				2					1	

Assessments:**Teacher Assessment:**

Two components of In Semester Evaluation (ISE), One Mid Semester Examination (MSE) and one End Semester Examination (ESE) having 20%, 30% and 50% weights respectively.

Assessment	Marks
ISE-1	10
MSE	30
ISE-2	10
ESE	50

ISE-1 and ISE-2 are based on assignment/declared test/quiz/seminar/Group Discussions etc.

MSE: Assessment is based on 50% of course content (Normally first three modules)

ESE: Assessment is based on 100% course content with 60-70% weightage for course content (normally last three modules) covered after MSE.

Course Contents:

Unit 1: Introduction to Intellectual Property Rights (IPR)	CO1	7 Hours
---	------------	----------------

Definition, Need, and Importance of Intellectual Property, History and Evolution of Intellectual Property Laws, International Organizations for Intellectual Property (WIPO, WTO, TRIPS), The Role of IPR in Technology and Business Growth.

Unit 2: Types of Intellectual Property	CO2	7 Hours
---	------------	----------------

Patents: Definition, Patent Filing Process, Patent Infringement, Copyrights: Protection of Literary, Artistic, and Software Works, Trademarks: Branding, Trademark Registration, and Disputes, Trade Secrets and Industrial Design: Business Confidentiality and Design Rights.

Unit 3: Entrepreneurship and Business Models	CO3	7 Hours
---	------------	----------------

Introduction to Entrepreneurship and its Importance, Types of Entrepreneurs and Startups, Business Model Development and Lean Startup Approach, Role of Incubators, Accelerators, and Funding Mechanisms.

Unit 4: Financial, Legal, and Ethical Considerations in Entrepreneurship	CO4	7 Hours
---	------------	----------------

Financial Planning, Fundraising, and Risk Management, Legal Aspects: Business Registration, Contracts, and Compliance, Ethical Issues in Entrepreneurship and Corporate Social Responsibility (CSR).

Unit 5: Innovation, Technology Transfer & Commercialization	CO5	8 Hours
University-Industry Collaboration and Innovation Strategies, Technology Licensing, Patent Commercialization, and Tech Transfer, Case Studies on Successful Technology Commercialization.		
Unit 6: Case Studies on IPR and Entrepreneurship	CO2,CO3,CO5	9 Hours
Case Study on Elon Musk & Tesla's Open Patent Initiative, Case Study on Copyright Infringement in the Software Industry, Successful Indian Startups and Their IPR Strategies.		
Textbooks:		
1. Intellectual Property Rights and Innovation Management – M. Ashok Kumar 2. Entrepreneurship Development and Small Business Enterprises – Poornima M. Charantimath 3. Innovation and Entrepreneurship – Peter F. Drucker

Title of the Course: Computer Networks Laboratory											L	T	P	Credit
Course Code: UCBPC0631											-	-	2	1
Course Pre-Requisite: Basic Knowledge of Data Communication System.														
Course Description: The course introduces main concepts of networking; application areas; classification; reference models; transmission environment; technologies; routing algorithms														
Course Learning Objectives:														
1. To equip the students with a general overview of the concepts and fundamentals of computer networks.														
2. To introduce fundamentals of networking concepts with the help of layered architecture which includes OSI and TCP/IP model.														
3. Familiarize the students with packet tracing and analyzing tools.														
Course Outcomes:														
CO	After the completion of the course the student should be able to										Bloom's Cognitive			
											Level	Descriptor		
CO1	Familiarize the student with the basic taxonomy and terminology of computer networks.										2	Understand		
CO2	Evaluate the principles of data integrity										2	Understand		
CO3	Apply Dynamic Programming concept to solve various problems.										3	Apply		
CO4	Configure and illustrate different application layer protocols										4	Analyze		
CO-PO Mapping:														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	
CO1		3		3								3	3	
CO2		2	3		3							2	2	
CO3		2	3		3							2	2	
CO4			2		3							2	2	

Assessments :								
Teacher Assessment: One component of In Semester Evaluation (ISE) and one End Semester Examination (ESE) having 50%, and 50% weights respectively.

ISE are based on practical performed/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc. ESE: Assessment is based on oral examination								
Course Contents:								
Experiment No. 1: Simulation between two different LANs using Cisco Packet Tracer.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 2: Simulation between wireless devices using DHCP in Cisco Packet Tracer.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 3: Study of crimping tools and technologies.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 4: Simulation DNS resolution in Cisco Packet Tracer.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 5: Study of the DNS tool with all its options: (nslookup ,dig, host ,whois)	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 6: Capturing and Analyzing operation of various application layer protocols Using Network Protocol Analyzer Wireshark.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 7: Configuration of FTP Server. (vsFTPd in Ubuntu).	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 8: Configuration and testing of Web Server in Ubuntu (Apache2).	(CO1,CO2,CO3)	02 Hrs.						
Experiment No.9: Implementation and configuration of e-mail Server. (mailX in Ubuntu).	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 10: Demonstration of remote desktop tools like Any Desk.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 11: Implementation of various routing protocols.	(CO1,CO2,CO3)	02 Hrs.						
Experiment No. 12: Configuration of Virtual Private Network.	(CO1,CO2,CO3)	02 Hrs.						

Textbooks:

Title of the Course: Machine Learning Laboratory										L	T	P	Credit	
Course Code: UCBPC0632										-	-	2	1	
Course Pre-Requisite: Knowledge of datasets and machine leaning algorithms.														
Course Description: This Course is designed to implement the various machine algorithms for solving given application problem.														
Course Learning Objectives:														
1. To apply the different types of machine learning algorithms to real-world data sets.														
2. To make use of modern tools to design and implement machine learning algorithms to solve specific problems.														
3. To evaluate the performance of different machine learning algorithms using appropriate metrics and techniques.														
Course Outcomes:														
CO	After the completion of the course the student should be able to										Bloom's Cognitive			
											Level	Descriptor		
CO1	Apply the different types of machine learning algorithms to real-world data sets.										3	Create		
CO2	Make use of modern tools to design and implement machine learning algorithms to solve specific problems.										6	Create		
CO3	Evaluate the performance of different machine learning algorithms using appropriate metrics and techniques										6	Create		
CO-PO Mapping:														
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	
CO1	3		2									2	2	
CO2	3	3	2		3							2	2	
CO3	2	1	1	3	3							2	2	

Assessments :**Teacher Assessment:**

One component of In Semester Evaluation (ISE) and one End Semester Examination (ESE) having 50%, and 50% weights respectively.

Assessment	Marks
ISE	25
ESE(OE)	25

ISE are based on practical performed/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc. ESE: Assessment is based on oral examination

Course Contents:

Experiment No. 1: Linear Regression-Implement a linear regression algorithm to predict a continuous target variable based on one or more predictor variables. E.g. Implement a linear regression model on a housing prices dataset to predict the prices of houses based on their features. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 2: Logistic Regression-Implement a logistic regression algorithm to classify data into two or more classes based on predictor variables. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 3: Decision Trees-Implement a decision tree algorithm to classify data into multiple classes based on predictor variables. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 4: Random Forest-Implement a random forest algorithm to classify data into multiple classes based on predictor variables. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 5: K-Nearest Neighbor Classifier-Implement a K-Nearest Neighbors classifier on a breast cancer dataset to predict whether a tumor is malignant (cancerous) or benign (non-cancerous). (CO1,CO2,CO3)	02 Hrs.
Experiment No. 6: Naïve Bayes Classifier-Implement and evaluate a Naïve Bayes classifier on a dataset of email messages. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 7: K-Means Clustering-Implement a k-means clustering algorithm to cluster data into multiple groups based on similarity of features (CO1,CO2,CO3)	02 Hrs.
Experiment No. 8: Association Rule Mining-Implement Apriori algorithm, to mine frequent itemsets and generate association rules from a dataset of retail transactions. (CO1,CO2,CO3)	02 Hrs.

Experiment No. 9: Neural Networks-Implement a neural network algorithm to classify data into multiple classes based on predictor variables. (CO1,CO2,CO3)	02 Hrs.
Experiment No. 10: Basic two layered artificial neural networks-Implement and train a two-layered artificial neural network to classify images of handwritten digits from the MNIST dataset (CO1,CO2,CO3)	02 Hrs.
Experiment No. 11: Microproject (CO1,CO2,CO3)	02 Hrs.
Textbooks:

Title of the Course: Information Security Laboratory		L	T	P	Credit								
Course Code: UCBPC0633		-	-	2	1								
Course Prerequisite: Computer Network and Programming Language like Java/Python.													
Course Description: This course is designed to do the practical implementation of Cryptographic algorithms and have hands-on experience on open source/free tools available to demonstrate the security concepts.													
Course Learning Objectives:													
1. To demonstrate encryption and authentication mechanisms. 2. To implement various cryptographic algorithms using various programming languages. 3. To make use of various security tools to analyze the security concepts													
Course Outcomes:													
CO	After the completion of the course the student should be able to		Bloom's Cognitive										
			Level	Descriptor									
CO1	Demonstrate encryption and authentication mechanisms.		2	Understand									
CO2	Implement various cryptographic algorithms using various programming languages		2	Understand									
CO3	Make use of various security tools to analyze the security concepts		3	Apply									
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1	2			1									
CO2	2	2		2	3							2	
CO3	2		2		3		2					2	

Assessments :**Teacher Assessment:**

One component of In Semester Evaluation (ISE) having 100% weight.

Assessment	Marks
ISE	25
ESE	--

ISE are based on practical performance/ Quiz/ Mini-Project assigned/ Presentation/ Group Discussion/ Internal oral etc.

Course Contents:

Experiment No. 1: Classical Encryption Techniques : Substitution Ciphers-To implement the program of substitution ciphers like Caesar Cipher, Playfair Cipher, Hill Cipher **CO1**

02 Hrs.

Experiment No. 2: Classical Encryption Techniques : Transposition Ciphers -To implement the program of Transposition ciphers like Rail fence technique, Columnar transposition. **CO1**

02 Hrs.

Experiment No. 3: Symmetric Ciphers : DES-Implement a program to perform Encryption and Decryption using DES cipher. **CO1**

02 Hrs.

Experiment No. 4: Symmetric Ciphers : AES-Implement a program to perform Encryption and Decryption using AES cipher **CO1**

02 Hrs.

Experiment No. 5: Asymmetric Ciphers : RSA Algorithm-Implement a program to perform Encryption and Decryption using RSA algorithm **CO2**

02 Hrs.

Experiment No. 6: Key Exchange Algorithm: Diffie Hellman Algorithm-To implement a program using Diffie Hellman key exchange algorithm. **CO2**

02 Hrs.

Experiment No. 7: Message Integrity using Hash function-To implement the program on Hash functions –SHA, MD5 etc to show the integrity check on the files transferred CO2	02 Hrs.
Experiment No. 8: Demonstration of SSL protocol -Working of SSL protocol using Network analyzer tools like Wireshark. CO3	02 Hrs.
Experiment No. 9: Demonstration of User Authentication Tools-Use any of the user authentication tools like Kerberos, NTLM, LDAP, RADIUS. CO3	02 Hrs.
Experiment No. 10: Demonstration of Firewall & IDS/ IPS Systems-Use any of the Windows and Linux based firewall for demonstration CO3	02 Hrs.
Experiment No. 11: Demonstration of Creation of Digital Signature & Digitally Signed Certificate. CO3	02 Hrs.
Experiment No. 12: Configuration of Virtual Private Network CO3	02 Hrs.
Textbooks:

Title of the Course: Consumer Behaviour		L	T	P	Credit								
Course Code: UCBMM0641		3	-	-	3								
Course Pre-Requisite: Basics of Marketing Management.													
Course Description: The course helps the students to know customer better and their buying influences.													
Course Learning Objectives:													
1. Understand concept and nature of consumer behavior study. 2. Differentiate between various models of consumer behavior. 3. Explain the concepts and significance of social influences on buyers. 4. Analyze the role of family life cycle and roles involved in buying.													
Course Outcomes:													
CO	After the completion of the course the student should be able to	Bloom's Cognitive											
		Level	Descriptor										
CO1	Explain of the pre and post purchase consumer behavior.	2	Understand										
CO2	Identify the dynamics of human behavior and the basic factors that influence the consumers' decision process.	3	Apply										
CO3	Examine different models of consumer behavior	4	Analyze										
CO4	Analyze the influence of Social determinants on consumer behavior	4	Analyze										
CO-PO Mapping:													
CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2
CO1					1						2		2
CO2		1								2			2
CO3									2	2			2
CO4								1		2			2

Assessments:**Teacher Assessment:**

Assessment	Marks
ESE	100

ESE: Assessment is based on 100% course content.

Course Contents:

Unit 1: Introduction to Consumer Behavior	CO1	6 Hours
--	------------	----------------

Introduction to Consumer Behavior, Concept, Scope and their applications. Nature and Need for Studying Consumer Behavior, Consumer Buying Behavior in Digital Era; Factors Influencing Consumer Behavior.

UNIT 2: Consumer Modeling:	CO3	10 Hours
-----------------------------------	------------	-----------------

General Model of Consumer Behaviour – The Economic Model, Learning Model, Psychoanalytic Model, The Sociological Model; Specific Model of Consumer Behaviour – The Howard Sheath Model, The Nicosia Model, The Engel –Kollat-Blackwell Model.

UNIT 3: Individual Influences on Consumer Behavior	CO2	6 Hours
---	------------	----------------

Consumer needs, Motivation; Emotions and Mood, Consumer Involvement; Consumer Learning Conditioning and Cognitive learning theories; Personality and Self-Concept Perception – Perceptual process, Perceptual Distortion and Factors Influencing Perception. Consumer Attitude –Attitude Formation and Change; Consumer Attitude and implications for marketers

UNIT 4: External Influences of Consumer Behaviour	CO2	7 Hours
--	------------	----------------

Need of studying Consumer behaviour, Consumer behaviour external factors, cultural behavioural factors, social factors, personal factors and psychological factors

UNIT 5: Social Influence on Consumer Behaviour-I	CO4	8 Hours
---	------------	----------------

Consumer groups; Consumer Reference Group; Family - Relevance of the Family for a Marketer, Family and Buying Decision Process, Family Life Cycle and Decision-Making. Diffusion of Innovation and Opinion Leadership

UNIT 6: Social Influence on Consumer Behaviour-II	CO4	8 Hours
--	------------	----------------

Social class and mobility Culture - The Measurement of Social Class, Relevance of Social Class for a Marketer; Culture – Characteristics, Components; Sub-Culture – Meaning and Types; Cross Culture.
